

Drum Heated Jacket Specification Sheet

Drum Type	205Litres/50 Gallon Nominal
Dimensions	585mm Diameter x 900 Height
Output	680 watt
Mains Voltage	230 Volt
Temperature Control	Electronic thermostatic controller with manual temperature adjustment, LED heater output Indication. Control 0 – 60 Degrees, Temperature Sensor sited on Drum Surface
Electric Connection	16 Amp Blue Plug with 4 metre Mains Cable
Outer Material	Heavy Duty Durable PVC
Internal Material	Double faced Silicone Rubber Coated Glass Cloth
Insulation	High Performance 50mm Mineral Fibre
Securing Method	Velcro flap with adjustable webbing straps and quick release buckle fastening
Complete with Lid	Fully insulated to reduce thermal loss

Additional Information:

Heating the Drum contents reduces product viscosity, improving flow and reducing decant time.

Fast speed to heat therefore small amount of energy required.

Yield improved, no product left behind therefore reduction in cost.

High performance insulation encapsulated in water resistant, strong and durable PVC outer of Industrial Standard.
